No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (222 Rosewood Drive, Danvers, Massachusetts 01923), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1994 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

THEORETICAL POPULATION BIOLOGY

Information for Authors

Theoretical Population Biology publishes papers on the theoretical aspects of the biology of populations, especially in the areas of ecology, genetics, demography and epidemiology. The main emphasis will be on developments of the theory but experimental results directly impinging on the theory may be accepted for publication. Manuscripts may be submitted to any one of the Editors or Associate Editors at the addresses listed on the inside front cover.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Theoretical Population Biology* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Form. Manuscripts should be typewritten and double-spaced throughout (including tables, footnotes, references, and figure captions); the original typescript should be prepared on one side of a good grade of $8\frac{1}{2} \times 11$ inch white paper, with 1-inch margins on all sides. Mimeographed or duplicated manuscripts will be accepted *if they are indistinguishable from good typed copies.*

Submit *three* (3) *complete copies* (the original plus two duplicates) in order to expedite processing of the manuscript. Each copy *must* include all figures and tables.

Number the pages consecutively. *Page 1* should contain the article title, author(s), and affiliation(s); at the bottom of the page type a short running head title not exceeding 35 characters (including spaces), and the name and complete mailing address (including zip code) of the person to whom proofs should be sent. *Page 2* should contain a short abstract, approximately 100 to 150 words in length.

Authors will be charged for pages in excess of eight per issue.

Headings. The organization of the paper must be clearly indicated by appropriate headings and subheadings.

Abbreviations. Do not use final periods after abbreviations of measure (cm, sec, kg, etc.) in text or in tables except for "in." (inch). Use the American Chemical Society *Style Guide*, 1986, as a reference.

Symbols. Do not underline letters that represent mathematical symbols; these will be routinely set in *italic* type.

Equations. Number equations consecutively, with the number placed in parentheses to the extreme right of the equation. Refer to equations as Eq. (3) or simply (3), except at the beginning of a sentence, when the word Equation should be spelled out. Punctuate equations to conform to their place in the syntax of the sentence.

Footnotes. Use only when absolutely necessary, in which case type the footnotes consecutively, double-spaced, on a separate sheet of paper in the order of their appearance in the text. Use Arabic numbers 1, 2, etc. In the text, refer to footnotes by superscript 1, 2, etc.

Tables. Number tables consecutively with Roman numerals in order of their appearance in the text. Type each table, double-spaced throughout, on a separate sheet, avoid vertical rules. Supply a short descriptive title below the table number. Type table footnotes, lettered *a, b*, etc., at the end of the table.

Figures. These should be numbered with Arabic numerals and should be mentioned consecutively in the text. Legends are to be typed together on a separate sheet.

It is essential that all illustrations be drawn with a lettering set, and therefore in finished form ready for reproduction. Lettering on the original drawing should be large enough to be legible after reduction to one-third. Graphs should be plotted with black India ink on light blue coordinate paper, no larger than $8\frac{1}{2} \times 11$ inches, with coordinates properly labeled; grid lines that are to show should be inked in black. Photographs should be submitted as glossy prints (5×7 or 8×10 inches) and not marred by staples, paper clips, or pencil marks. Original drawings no larger than $8\frac{1}{2} \times 11$ inches are preferred.

References. These may be cited in the text, as, e.g.: Doe (1980) has observed that ...; (Doe, 1981); (Doe *et al.*, 1982); (Doe, 1983, p. 250). Suffixes a, b, etc., should be used following the date to distinguish two or more works by the same author(s) in the same year, e.g., Doe, 1984a,b. Literature citations in the bibliography should be arranged alphabetically according to the surname of the author. Order of items: author(s), date of publication, title of article or book, journal name, volume number, inclusive pages, publisher and city (for books only). Journal abbreviations should follow the style of *Chemical Abstracts Service Source Index*, 1985.

Author's alterations in excess of 10% of the cost of composition will be charged to the author.

Reprints. Fifty reprints of each article will be supplied free of charge. Additional reprints can be ordered on the form accompanying the proofs.

Personal Computer Disks. Manuscripts may be submitted to *Theoretical Population Biology* on personal computer disks after the manuscript has been accepted and after all revisions have been incorporated onto the disk. Label the disk with the type of computer used, the type of software and the version number, and the disk format. All tabular material will be typeset conventionally. Art must be prepared as camera-ready copy; see the section on Figures earlier in this Information for Authors.

A hard copy printout of the manuscript that exactly matches the disk file must be supplied. Academic Press will not accept disks without accompanying printouts of all files on the disk. File names must clearly indicate the content of each file. The manuscript will be edited according to the style of the journal, and the proofs must be read carefully by the author. Disks that are not translatable or economical to process will not be used. The publisher reserves the right not to use the disk.

For further information on preparing disks for typesetting conversion, please contact the publisher (Editorial Supervisor, Journal Division, Academic Press, Inc., 525 B Street, Suite 1900, San Diego, California 92101-4495; telephone: (619) 699-6415; fax: (619) 699-6800).

Historia Mathematica

Editor
David E. Rowe
Universität Mainz, Germany

Managing Editor
Karen Parshall
University of Virginia, Charlottesville

Historia Mathematica is concerned with the history of all aspects of the mathematical sciences in all parts of the world and all historical periods. The journal publishes occasional biographies of mathematicians and historians, studies of organizations and institutions, essays on historiography, and articles on the interactions among all facets of mathematical activity and other aspects of culture and society.

In addition to research articles, **Historia Mathematica** includes the following departments: Notes, News and Notices, Sources, Meetings, Projects, Reviews, Abstracts, and Letters to the Editor.

Published under the Auspices of the International Commission on the History of Mathematics of the Division of the History of Science of the International Union of the History and Philosophy of Science
